Enterprise-grade hospital software for Africa

OUR MILLENNIAL SOLUTION

 helium health

 helium

Enterprise-grade hospital software for Africa

About Us

Helium Health was founded in 2015 with our flagship product, Helium Health EHR, which is a cloud-based/offline health records and hospital management (EHR/HMIS) solution that is simple, robust, easy-to-adopt, highly customizable and built around the peculiarities of the Nigerian market.

Our vision to power Africa's healthcare technology necessitates rapid expansion to cover the region which led us to acquire Medicplus, a 6-year-old organization with a robust enterprise-grade EMR, serving Nigeria's premier facilities such as Garki, Nisa Premier and Limi Hospitals as well as hospitals in also Ghana, Liberia, and Cameroon.

Together we are the largest, most experienced, local player with a suite of products that cover the different market segments and are backed by our local/international partners and investors.

Our Products

Helium

Medical records & hospital management solution

DiagnosticAI

Artificial intelligence powered triage and diagnostic engine
